Monday – Friday 11am-7pm
Saturday 10am-6pm
Sundays 1pm-5pm

HIGHLIGHTS OF NEW FRESHWATER FISH THIS WEEK!

We received many interesting and incredibly beautiful freshwater fish this week. Here is a brief description and picture of some of these new arrivals! Quantities on many of these fish are limited so don't miss out.

THE RESPLENDENS RASBORA (SABWA RESPLENDENS)

In the past, this fish was only available from the wild. They would arrive in terrible condition and were difficult to salvage. Well now we have a supplier that is tank breeding this striking rasbora! This group arrived with no losses, full bodied and in glorious color. Treat this fish as you would other soft water fish like rummy nose tetras, harlequin rasboras, neon tetras, etc. They prefer soft water; temperature 76-84 degrees; pH of 6.5-7.5; peaceful tankmates; schooling.

THE ROUND-BANED BARB (PUNTIUS RHOMBOCELLATUS)

This is the stunning barb we have in our show planted aquarium when you come in the door of the store. Everyone asks about this fish and we

have been unable to obtain any for a couple of months. We now have a good supply of this completely peaceful, brightly colored, plant-tank safe community barb. This is another fish that is now being tank-bred.

The round-banded barb prefers soft water with a temperature range (steady) of 74-84 degrees; pH range of 6.0-7.5 ; schooling preference ; extremely hardy.

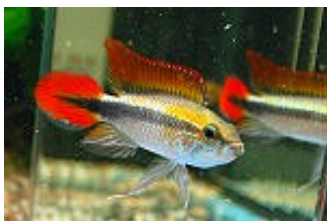

XL GERMAN BLUE RAM (MICROGEOPHAGUS RAMIREZI)

This is one of the most popular of the peaceful dwarf cichlids that we sell. These fish are completely safe in a community aquarium and are loaded with color. This particular shipment of rams is extra-large in size (about 2"!) and they

are full color adults. German blue rams **MUST** be placed in aquariums with good husbandry. Like most of the peaceful dwarf cichlids from South American, they need clean water, low in organics with regular monthly partial water changes. You just cannot get a more beautiful freshwater fish for the money. We also have 1” juveniles that are developing color **AND we have the brand new RED GOLD RAM from Germany** as well (only 3 of these). Rams need soft water; pH 6.0-7.4; temperature 78-85 degrees; peaceful tankmates.

GERMAN BRED FANCY APISTOGRAMMA PAIRS
 Many of you have been asking for these fish and our supplier finally received a shipment! These fish are sold only in pairs and they are somewhat expensive but you will not believe the size and color on these incredible tank-bred peaceful dwarf cichlids. Like rams, this peaceful dwarf cichlid needs clean warm water to thrive. We also suggest beefing up their diet with assorted frozen food goodies like bloodworms, brine shrimp, mysis shrimp included in their basic flake food diet. The conditions for keeping these fish are: clean water low in organics; pH 6.0-7.4; temperature 76-84 degrees; monthly partial water changes; soft water only!!

APIST. AGASSIZI DBL RED

A. CACATOIDES DB ORANGE

APIST. VIEJITA GOLD

APIST. HONGSLOI II

APIST. AGASSIZI ORG-RED

APIST. MACMASTERI REDNECK

GEOPHAGUS ‘RED HEAD TAPAJOS’

This is the first time we have been able to obtain this awesome variety of Geophagus. These are wild-caught but in excellent condition and already beginning to show brilliant color patterns. As with other geophagus, they should be kept with medium to larger peaceful to semi-aggressive fish. Tankmates like gouramis, larger barbs, bala sharks, severums, keyhole cichlids, etc work fantastic together. Just don’t keep this species with small tetras or aggressive South American cichlids. As with other geophagus, they are constantly cleaning your gravel or sand bed. These fish suck up the substrate and filter out debris! The common name for the geophagus group is Earth eater due to their sifting habits. As with other South American species, provide these fish with soft water; pH 6.0-7.5; temperature 76-84 degrees; monthly partial water changes; low organic levels.

BABY PEACOCK BASS ARE IN THE HOUSE!!
(CICHLA ORINOCENSIS)

Okay, you wanted these monsters so come on down and buy them before they grow up!! Peacock bass are just one of those fish that some folks just cannot live without but you just better

remember that we do not take them back after they eat all of your other fish!!! We are being up front with you here gang, this fish gets HUGE and has a monster of a mouth. You may be surprised to know that the juveniles are extremely wimpy and can be easily beaten up by other cichlids. Perhaps the other cichlids know that they better beat them up now or be eaten by them later!! Growing to 2 foot long, you MUST have a larger aquarium with a strong cover. Peacock bass can be picky eaters preferring mostly live foods beginning with feeder guppies, them moving to feeder rosey redds, eventually enjoying feeder goldfish and finally feeder goats (just kidding). This is an easy fish to keep other than the demand for live foods (and fingers).

Some of the other cool freshwater fish that arrived this week are: Butis butis (the ugly upside-down fish eater), GREEN GLO-FISH (they only allowed us 12 of these so come and get them as they are going fast), XL Elephantnose (these are about 8-10" long!), Ornate Double Trunk Elephantnose (rarely imported, about 3-4" long now), Tank Bred Baby Alligator Garfish (cool 3-4" fish eaters), Jumbo Fire Eel (about 15" long!), Turashukin Catfish (just rare and cool catfish), Chinese Butterfly Sucker Loaches (beautiful!), M/L Jaguar Cichlids (hard to find size), Black Paradise Gouramis (super fins), Bright Red Paradise Gouramis (already striking red color showing), Gold Australian Desert Gobies (perfect condition on these). See our full list of new arrivals below.

ATTENTION POND CUSTOMERS!!!

BIG KOI STILL AVAILABLE!!

Since the large and extra large koi have not caused any water quality issues in our vats, we have decided to hold on to them ONE more week for purchasing. These fish are domestic koi with mixed colors and markings. Though these are not show fish by name, some are certainly showy in size! We will not be able to hold these fish for you – all sales must be picked up at time of purchase! **These fish are sold AS IS – no warranty.** Our supplier is trying to make room in his holding vats for growing out small fish for next season. These are healthy fish quarantined and held at his facility on Johns Island. You must have a large pond to house any of the fish he is

bringing us for this clearance sale. There will be NO quantity discounts or other discounts available on these fish as they are being sold for far less than their true value. Early birds get the best selection to choose from so don't wait until the last minute to get some beautiful large koi for your pond!!

WHATS NEW AT TIDELINE?
